

ABSTRACT OF THE DISCLOSURE

A method, computing machine and computer readable medium provides a computer user with the ability to route a print job to a service bureau over the Internet. The computer receives a print command input for printing a document. In response to the print command, the document is routed over the Internet to a service bureau for printing. Routing may involve activating a communications browser program in the computer and transmitting the document to a server associated with the service bureau. An Internet print web page including information identifying print job options and a print order form is retrieved from the server and displayed on the computer screen. In response to ther user's selection of a print job option identified on the print job order form, the print job and order form is transmitted to the service bureau.
